

main.py

```
1  from karel.stanfordkarel import *
2
3  # File: warmup.py
4  # -----
5  # The warmup program defines a "main"
6  # function which currently just has one
7  # Command. Add two more commands to make karel
8  # pick_beeper(), move()
9  def main():
10     move()
11     pick_beeper()
12     move()
13     # add your code here
14
15
16
17
18 # don't edit these next two lines
19 # they tell python to run your main function
20 if __name__ == '__main__':
21     main()
```
